RESEARCH INTERESTS

In broadest terms, I research the who, what, where, when, why, and how of happiness. I investigate the architecture of subjective well-being, including its outcomes (e.g., positive emotions, life satisfaction), predictors (e.g., marital quality, friendship satisfaction), mediators (e.g., social connection), moderators (e.g., culture, gender), and downstream consequences (e.g., career success, physical health). I have two primary lines of research that (1) test the causal effects of positive social behaviors (e.g., expressing gratitude, doing acts of kindness) on well-being, and (2) examine associations among different types of close relationships (with romantic partners, friends, family) and well-being. Considering the rise of digital communications, I also explore the effects of technology (e.g., smartphones, social media, AI).

KEYWORDS: affect, close relationships, connection, culture, emotion, family, friendship, gratitude, happiness, health, interventions, kindness, marriage, personality, positive activities, prosocial behavior, singlehood, smartphones, social behaviors, social media, well-being
